

ACETAMOX Tablets

Composition:

Each tablet contains:

- Active ingredients: Acetazolamide 250 mg

Acetamox inhibits carbonic anhydrase enzyme , this inhibition leads to decrease the formation of hydrogen and bicarbonate ion from carbon dioxide and water and reduces the availability of these ions for active transport.

Indications:

- Actamox is indicated in treatment of glaucoma (open angle or closed angle glaucoma) in some cases local application of miotics or even beta blocker drugs can be used in addition.

Dosage:

- One to four tablets daily as initial dose, the maintenance dose is titerated according to the case of the patient and its response.
- Pediatric dose : 8 to 30 mg / kg

How Supplied:

- Boxes containing 2 strips, 10 tablets each (2 strips x 10 tablets)
